Test Comments: *An estimated 14.2" of rain fell on this field during May, much of which came shortly after planting. The prolonged soil saturation caused noticeable water stress on plants observed during a June visit. Warmer and drier weather followed but plant development was delayed from May through June. Plants had healthy stalks at harvest. Ear girth was excellent but ear tip die-back was common.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
