Test Comments: *This site started the season soggy and cooler than average, which slowed crop development through June. Heat picked up in July and August, but rain was scarce. Showers returned late season to help fill grain. Without an early October hard freeze, all corn maturities could complete grain fill. Plants were shorter than normal with good ear size and kernel depth. Harvest stalk integrity was weak.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
