				n/a	non-GMO

Test Comments: Throughout this tests site, corn plants showed signs of extreme stress. After planting, seedlings struggled to emerge with several in-row gaps. Plants were short in general. Ears were small, some with incomplete kernel sets due to poor pollination. Kernels were small too. The lack of rainfall and periods of high heat stole yield potential. Stalks stood very well and strong cobs made harvest easy.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
