**Test Comments:** *Glyphosate herbicide was mistakenly post applied to this site; therefore, non-GMO products did not survive. Jim stated that his nearby field experienced green snap from strong winds. Some full-season hybrids lodged but no early hybrids. Limited July and August rain caused some hybrids to cannibalize their stalks to gain yield. These hybrids died prematurely, with small grain and moisture below 15%.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
