Test Comments: Some hybrids at this site had good kernel depth near 1/2", and then others only had 1/4" - 3/8" depths. July had less than 2.5" of rainfall and August had only 0.48". John's no-till may have helped conserve some soil moisture during the drought stress? Plant lodging mainly reflects stalk lodging due to stalk rot.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
