**Test Comments:** *This location was off to a great start, and emergence was excellent. Vegetative growth stages received decent rainfalls. Once tasseling started, the spigot shut off. Most hybrids started to die prematurely. There was a fair amount of rust present on the leaves at harvest. Most of the early-season hybrids had the tops blown out from the last strong wind storm. All lodging reported was stalk lodging.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
