**Test Comments:** Site received 4+ inches of rain minutes after planting and more the next week. The rains reduced crop emergence. The site was mistakenly sprayed with glyphosate, killing non-GMO products. The site was harvested regardless. Despite being statistically valid, corn yield was largely impacted by inconsistent weather related stand reductions (low stand = low yield). These variable results are rejected.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
