**Test Comments:** *Good early vigor as crop was out of the ground in 5 days. This was helpful for utilizing all the rain this area received in July. Some water sat on the test setting the crop behind areas that pond water. Stunted plants did catch up but made grain moistures to be variable in that area. Crop was standing nice at harvest with most early test ears still upright and late test ears were mostly hanging down.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
