 n/a non-GMO

Test Comments: A nice test to harvest, as crop stood well with only light lodging. A stalk strength "push test" found some stalks had little strength left. Pushing 30 degrees from vertical, the stalk folded over. Diseases present include Anthracnose and leaf blight. Considering the conditions this season, pollination was good with only short tip back on ears. Kernel depth was shallow and kernel size varied.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
