Test Comments: *This area missed some showers at planting and conditions were getting dry. We had to plant 2.5 inches deep to find ample moisture for seed germination. Good emergence and final stand. A strong storm before pollination led to some green snap below ear set node. This made yields variable, especially in the full-season test. At harvest, ears hung down with good retention and varied stalk quality.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
