Test Comments: Rain makes grain but also makes other issues. Yields were variable due to excessive early season water. Only 2 reps were used eliminating the most variable results. Lodging scores are high due to stalk rot (Anthracnose, Fusarium and Gibberilla). At harvest, plant tops were broken off, no leaves on stalks and plants bent over 6 to 8 inches above the ground. There were some barren stalks observed.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
