Test Comments: *This site has been continuous corn for 3 years. Brian added lime last fall as part of a long-term variable rate fertility program. The wettest spring ever seen in this area delayed planting. A 5" "duck drowner" fell in mid-June, causing uneven plant development in these soils. Rain was almost non-existent in July and August, taking the top off these yields.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
