**Test Comments:** *Rains in April delayed planting, but soil conditions were excellent when seeded. Rains in May and June were not as excessive here, so the crop got off to a good start. July was cool and dry. August stayed dry, but warmed considerably, helping the corn finish well. The Full-Season test was located on higher ground, and frost held off until mid-October, so these hybrids to reach full economic yield.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
