Test Comments: *This was an excellent, high yielding location. Plants started off great, with excellent emergence, and good early season growth. Rainfall was limited, but timely during July and August when the corn needed it most. All lodging that you see noted was due to stalk lodging, and there was very little disease that could be found at harvest. Corn plants were very tall, ears were girthy and kernels were large.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
