Test Comments: *Planting was delayed due to wet soil conditions this spring. Another heavy rain shortly after planting hurt a good portion of the tests on emergence. Lack of summer heat made it difficult for corn to fully mature and dry down. Harvest moistures were high, but so were yields. Plant health was excellent at harvest, with little evidence of disease. Harvest started a few days after a killing frost.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
