Test Comments: *Corn was standing well with little lodging at harvest. However, stress from early summer has hurt stalk quality and wind with a little moisture would cause lodging. The crop got off to a good start and early plant health allowed it to endure the dry weather and take advantage of timely rains later. No gray leaf spot was noticed at harvest. Corn has finally dried down and shells of the cob easily.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
