Test Comments: *Excellent emergence and good rainfall for the entire growing season. Temperatures were moderate with no prolonged heat waves. Foliar diseases were present but fungicide did not allow them to cause any real problem for most hybrids, there was some stalk lodging so this plot gave us a good look at stalk health at harvest. Overall rating of this test is a 9 out 10.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
