Test Comments: We planted a little late in the growing season as the spring was wet and cool in the area. July rainfall was 1.5 inches below the 30-year average. The corn was somewhat short with an average of six feet this tall. Despite some strong winds at harvest, the corn stood well. Grain moistures remained high this fall due in part to the later planting date and soggy fall weather.

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
