TEST COMMENTS: *With the heavy rains in June, some ponding slowed plant development. Plant height ranged from 26" to 41". There was some light hail damage at second trifoliolate. Crop emergence was good with light plant disease, but some insect damage. The presence of stink bug was noticed. The beans per pod varied from 1 to 3 beans per pod, with most of the 3-bean pods on the bottom half of plant.*

† See last page for additional information. Results in **bold** are significantly above the test average. **CK** = check and **GC** = grower comparison products, **§** = United Soybean Board entry; **ns** = not significantly different.
