**Test Comments:** *A cool period from May 12-19 slowed germination and reduced final plant stands. Nearly 12" of rain in June left the field with plenty of moisture as July turned dry. A June 17 hail storm damaged leaves but did not knock down plants. Extended cool spells throughout the season delayed crop progress from normal. Great uniformity across the test area gave very consistent results.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
