Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.5 Drying = \$0.045 Price = $\frac{\$3.15}{\$3.15}$ Local GMO non-GMO

Test Comments: A glyphosate application killed all non-RR hybrids here. Early test results rejected as yields beside dead plots were compromised. Cool conditions after planting caused slow emergence and poor vigor. June rains of 14" saturated soil (no ponding). Overall, plants were short, stunted and pale green as N loss was evident on lower leaves. At harvest, ears were small and yields less than spectacular.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
