Test Comments: *The good planting conditions of early May were followed by cool temps that slowed seedling growth May 11-19. June rainfall was 7.5" over the 30-yr average. July conditions for pollination were excellent and plants appeared healthy except for some common rust. August rainfall was 8.6". Overall, cooler summer temps slowed crop development and delayed maturity. Good harvest stalk quality.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
