Test Comments: *This corn-on-corn site started with cool and wet weather for 10 days after planting. June brought nearly 17.5" of rain to the area; 12.5" above average. The trial area had no ponding, however, saturated soils stunted corn development and height. Much of July and Aug were relatively dry. Extended cool spells this season delayed crop progress. The cool Sept 5-16 period further delayed maturity.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
