**Test Comments:** This location started with a cool wet spring. The lack of good heat all summer delayed corn maturation more than normal. July was somewhat dry, limiting top end yield potential for the tests. There was a mess of diseases present at harvest. A windstorm hit the test site just before pollination causing goosenecking to a good portion of the hybrids, significant enough to slow the combine.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
