Test Comments: Glad to see that this area had a good year because they have not fared well for rainfall the last 5 years. The trials started off great, corn was uniform at the V3 growth stage. Continued to receive good timely rainfalls, and experienced excellent pollination. Stalk quality was pretty good at harvest, with only 30% failing a pinch test. Anthracnose and some common rust were present in September.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
