Test Comments: Don said this is probably his best crop year ever. Corn had good even emergence, consistent stands, and abundant rains. Ear development was size consistent with great tip fill. Some field areas had water ponding where yields suffered and varied. One early test replication was removed to avoid this issue. Lodging was mostly minimal, but some had stalk rot. Leaf disease pressure was moderate.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
