**Test Comments:** *Corn got off to a great start, excellent emergence and warm moist soils got this plot looking great by June. Rainfall for much of the summer was above normal, temperatures were cooler as well. Good weed control with little insect pressure kept corn maturing nicely through August. Anthracnose and gray leaf spot came late but did not affect yield, some hybrids did have some standability problems.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD (0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
