**TEST COMMENTS:** *On June 27, this crop had 4 trifoliolate leaves and unopened flowers present. Bean leaf beetle and Japanese beetle were feeding on foliage. The later planting date may have helped yield, as a wet August helped fill pods with good sized beans. Some empty and single bean pods noted on plant bottoms. Harvest grain moistures were high but suitable harvest days are few and far between.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
