Test Comments: *Favorable weather from planting through maturity led to relatively stress-free growing conditions. Largest rain events were 1.5" June 21, 1.85" Aug 18, and 3.4" on Aug 28. Area conditions favored northern corn leaf blight and gray leaf spot development. Cool spells from mid-June to early July and mid through late August delayed crop progress. Good stalk integrity and ear retention at harvest.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
