**Test Comments:** *This site had adequate moisture all season, ending 8.72" over 30-yr average. Excellent ear size and kernel depth was common. Stalk rot in lower stalk tissue was hybrid specific. High winds Oct 11 caused significant lodging of susceptible hybrids. Ear retention was good and harvest loss minimal. Jeff mentioned using a corn reel to harvest some down corn. He also observed it was hybrid specific.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
