Test Comments: *These tests were a major harvest challenge. Mid-year, the site received some strong wind that goosenecked the corn, severe in areas. Gray leaf spot and northern corn leaf blight was present. Stalk had few brace roots and were poor quality as lodging scores reflect. Ears were short and well polinated. Area fields that were not stressed, yielded at least 10 to 20 bu/acre better than the tests.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
