Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.025 Prices: GMO = \$3.70; non-GMO = \$3.70

Test Comments: This area received record rainfall which caused ponding in many area fields including our test area. Early-season test portions had ponding, reduced yields and variable results so data was rejected. The full-season test performed well. Stalk quality was poor with breakage just below the ear. Ears were well pollinated with good kernel depth and strong cobs. Leaf blight was present in the plot.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
