**Test Comments:** Mike chose not to apply fungicide to this field. Leaf disease pressure was present, but not excessive. Some hybrids had dead tops possibly from early death? Moderate stalk rot pressure was an issue. "Pinch tests" on lower stalk nodes revealed rotten stalk rind & pith on infected hybrids. Lodging scores reflect below ear stalk breakage. Plants were 8-10 feet tall with excellent ear development.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
