Test Comments: *This area suffered from excessive spring rains from early May - early July. The site was dry for the 4 hours it took us to plant, but then got heavy rains again. The early test was completely drowned out. Three of 4 full season reps survived for harvest. The high grain moistures depict later planting date & slow growth from cool rains in June-July. Moderate leaf disease pressure was present.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
