Test Comments: Kevin said that a nearby July tornado infused thunderstorm, delivered 6 inches of rainfall on this field. Earlier in June, record rainfall amounts stunted seedling corn plants which never uniformly recovered. An attempt was made to harvest the tests, however, results were highly inconsistent and unreliable due to the early season wet conditions and are not presented.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). *Italicized* brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
