Test Comments: This crop appeared to be in good shape. Well, looks are deceiving. Nearly 15 inches of rain fell in June. The excess water stress shortened ears and reduced kernel size. A small swale across the test is normally not noticeable. Yields were reduced there this year. In the surrounding field, yields varied from 0 to 200 bu/acre plus depending upon drainage. Due to yield variability, data is rejected.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
