Test Comments: *Cool and wet conditions in the early season slowed early development, but temps and moisture in late May, June, July, and August were ideal for yield potential. Mark Krcil recorded 17.83" rain for the growing season. Full season corn yielded slightly more here, as it did at many sites. Gary reports that their whole farm average will be almost 220 bpa, among their best corn crop ever.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
