Test Comments: *Keith asked me if there were conventional hybrids in these tests, and I incorrectly told him no. Those conventional products were killed by Roundup. I replanted early maturing corn into dying plots to preserve test integrity. I sincerely apologize for my error. High winds in late August caused up to 10% greensnap in some hybrids. Oct 12 strong winds caused some stalk lodging in this crop.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceeded the grain moisture limit for this test. **ns** = column values not significantly different
