Test Comments: *This location struggled the entire year. Vast amounts of rainfall followed planting, flooding out an entire rep of each test. All corn was stunted due to persistent rains during June & July causing considerable amounts of variability in the surrounding field. There was little evidence of stalk diseases, but leaf diseases such as blights and rust were noticeable on most hybrids.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
