**Test Comments:** Great location that always produces great data. Corn emerged almost perfectly and was extremely uniform at the V5 stage. Rainfalls were consistent during the season, adding to crop uniformity. There was evidence of northern corn leaf blight and gray leaf spot on leaves plus Anthracnose and charcoal rot in the stalks. Lodging scores reflect stalk lodging caused by strong wind a month ago.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
