TEST COMMENTS: *This plot performed very good for being planted late June. Most plants were 38 inches tall with good pod sets. No major lodging was seen. Plants were mature with dry stems and harvested very well, unlike much of the area where green stems are common. Some late season weed pressure is noted. Area fields had very short beans. Persistent rain this spring made timely soybean planting difficult.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
