TEST COMMENTS: Soil moisture variability across the test area impacted the uniformity of this location. Most varieties emerged very well but struggled to maintain a consistent growth pattern, causing areas of the test to have very short plants. Plants did compensate well when it came time for pod set and filling. It was difficult to locate much for diseases at the time of harvest that effected the plot.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). ns = column values not significantly different.
