TEST COMMENTS: *This location has light sandy soil and becomes short on moisture easily. Plants were all really short and standing perfectly. They were small stemmed and easy to cut, with seed size being pretty average. There was little disease that could be found in the test and plant stature was still sturdy. Beans were easy to combine, and able to obtain an almost perfect grain sample.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
