Test Comments: *Moisture was plentiful here, as with many locations across southern MN this year. 70 mph winds in late June, caused greensnap of various degrees. The lodging scores reflect greensnap. Otherwise, this test site was in good shape at harvest. The May 13 frost did not affect plants spiking out of the soil here. Dru reports corn yields averaging 220-230 bpa, except where swirling lodging occurred.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
