Test Comments: *The planting conditions were ideal. The stand was very uniform throughout the whole plot, close to perfect. This area had 2 hail events one in early June and another July 16. The July 16 event included 2.5" of rain and 60-70 mph winds which greensnapped plants. The early test yields are variable due to greensnap. Keith said that he was happy with yields this year, despite the weather events.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
