Test Comments: *The test site is a lot better than last year's down out. This well drained site was needed as July and August rainfall was 3.9" and 5.1" above normal, respectively. Plants stood well with select hybrid stalk lodging. Ears were long and filled with deep kernels. Weak ear shanks and Diplodia ear rot was observed. Ben mentioned that area yields are very good and Diplodia lowered some field averages.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
