Test Comments: *High winds approaching 80+ mph on July 5 caused severe green snap in some hybrids while others were leaning pretty good but not snapped. Yield differences were largely influenced by degree of green snap. Wind damage and excessive rainfall may also have interfered with pollination resulting in shorter ears than typical here. Total growing season rainfall was about 9.4" above the 30-yr average.*

Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
