**TEST COMMENTS:** Soybean plants were very tall at harvest as most approached four feet in height. We had some plant lodging and beans in some individual plots were lying flat from deer or wind damage. Some of the yield variability in the test results can be attributed to this crop damage. The test area was weed free but had a few volunteer corn plants present at harvest.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
