Test Comments: *Planting conditions and seedling emergence were very good at this site. A strong summer wind event caused plant greensnap of select products. The lodging score reflects only greensnap since there was no lodging at harvest. Plants had minor leaf disease incidence. Ears were girthy and well pollinated and filled with kernels to the tip. No weed control issues. Both tests were quite uniform.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
