Test Comments: Except for late May and early July dry periods, rainfall amounts were pretty consistent. Hail on July 2 caused less than 20% foliar damage uniformly across the test area. Plants were rapidly growing at this time and recovered quickly. Largest rain events were 2.9", May 15-16; 1.3", June 27-30; followed by 3.4", Aug 20-21. Rainfall totals, planting to maturity, were 0.5" above the area 30-yr average.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
